## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1 – 6, 13 – 25 and 39 - 44 drawn to a method for enrolling, storing, contacting the customer including a method with a plurality of businesses, classified in class 705, subclass 26.
- II. Claims 7 – 12, 26 – 38 and 45 - 50, drawn to an article comprising a computer readable medium that stores computer readable instructions for a messaging and alerting system for offering to a customer to use for enrolling and forming a query, classified in class 710, subclass 5.
- III. Claims 51 - 63, drawn to a computer messaging and alerting system and method comprising an architecture operable to enroll, store, receive information as well as receiving a customer message from a wireless application, receiving a customer information from a database, writing a customer call and identification to a second database and processing a voice call, classified in class 707, subclass 104.1.

Inventions Group I and Group II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process.

(MPEP § 806.05(e)). In this case Group I can be practiced manually. Claim 1 for example, does not require the use of any computer readable medium in order to impart patentable distinction to the method recited therein.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

Art Unit: 3625

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group III, restriction for examination purposes as indicated is proper.

Inventions Group II and Group III are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case, Group II can be executed without a computer messaging and alerting system. Claim 7 for example, does not require the use of a computer messaging and alerting system and method comprising an architecture in order to impart patentable distinction to the article recited therein.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group III, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to be completed must include an election of invention to be examined.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
